

Software Version Notes

Retül Version 4f

-Add a second grip and arm pad capture on the Bike tab. This will increase accuracy in the grip width measurements.

-Completely revamped the bike reports. There are now 3 different bike reports for Road, TT, and Mountain bikes. Proper bike report is displayed based on bike style drop down menu on the Bike tab.

-Added 17 new bike measurements for the 3 different styles of bikes including more specific measurements for certain styles of bike.

-Added compensation code for leading and trailing whitespace in the Bike Tab bike make/model name fields that sometimes led to bike files not being saved.

-Removed the minimum screen resolution requirement allowing the software to be installed on a PC of any screen size, even if the screen is less than the application window size. This allows the software to be installed on Netbooks.
